CHAPTER 1

INTRODUCTION

In this rapid growing generation, technology is growing day by day. we can see that in this era of advanced technology we also have to do work more smartly that's why most of the shops need advanced techniques to do their work more speedily and smartly. [1]

We chose our project system as ANJ mobile shop website for manage a mobile shop. The main purpose of our project is to do smart work and also, storing most important data like billing, customer information and product information. It will help to organize ANJ mobile shop data in very systematic way.

In our website project we have included billing system, product, customer management, manage brands, manage sell details. We can add the details of mobile, tablets, headphones and other products. We can edit the data as well as retrieve the data whenever required.

In existing system details are maintained manually means paper based. Might be lost cannot retrievable in this older method. Hence, this process required an improvement and a good monitoring website. So, we have developed worthy website for ANJ mobile shop. This is very useful for a mobile shop to manage their shop easily.

This website is computerized and it gives more facilities than older file-based website. It provides quick access to any data. In this website, system user has to enter the data only once and then it gets linked with all files. This reduces the workload of user and it is also a time saving process. The information about any customers and all the related shop details can be easily retrieved. And also, the system maintains all records easy.

1.1 PROBLEM STATEMENT

The demand for using the Internet is increasing year-by-year. therefore, In ANJ Mobile Shop website use to maintain sales detail in paper files and folders. They use to keep the record of product sold, Customers, Suppliers, etc. in a register. A daily register is maintained to keep track of complaints. Preparing report is very time consuming and tedious task. For searching of single record, whole register (documents) is to be searched which is very time-consuming task. [2]

And also, we listed other major problems that website has:

- As mentioned above most of the details are maintained manually. Due to this the data retrieved is time consuming. Error can be happened Due to human calculation errors occur.
- Lack of security
- If stored documents lost, cannot retrieve.
- Overall Difficult to maintenance.

1.2 FUNCTIONAL REQUIREMENT

Functional requirements are describing the internal working nature of the system, the description of the system, and explanation of each subsystem.

The identified functional requirements are:

- All the information about sale, purchase will be maintained properly in this website.
- produce report for sale, bill information.
- System developed to be very user-friendly interface so user can easy to handle the website.
- can calculate, manage details and print any report within seconds.
- This system will provide timely report information (monthly progress report) about shop sales).
- System Admin(user) can access & control the entire website.

1.3 AIM

This project aims to design a phone shop named ANJ phone shop that mainly sells s and pass Ultimate aim of the project to bring the agile frame work into the application which can grow in features time to time.

Though the website is plan to cover small community in beginning in time it can expand and target larger communities with functional capacity increases.

1.4 OBJECTIVE

The overall objective of the project is to enhance and improve the effectiveness and efficiency of the service provided by the shop by introducing a full-website application that can be divided further as follows,

• To improve the efficiency of daily shop processes such as sales and stock control by eliminating considerable delays and bottlenecks.

• To enhance the shop decision-making process by providing the necessary reports timely when needed.

• To preserve the daily shop data related to sales.

• To eliminate unnecessary paperwork & workload in daily shop activities.

CHAPTER 2

LITERATURE REVIEW AND STUDY OF SIMILAR APPLICATIONS

2.1 LITERATURE REVIEW

In this present world technology is growing faster than we imagine. The website is designed to manage various types of works included in showrooms like sales, updated stock details, billing, reports and purchase records for weekly or monthly or even yearly. [3]

In current trend most of the showrooms like dress stores, electronic item stores and mobile stores are using software application for managing the activities of the data management to reduce the manual work and improve standard up to date.

In this project I planned a software application for an ANJ mobile shop for handling the purchase details of the customers, generating the bills for every purchase by the customers, transaction details, updating the newest stock details to the database and at the end analyze the month reports.

2.2 STUDY OF SIMILAR APPLICATION

We chose this system because of we found some issues in the existing system in our place, Such as:

- All details maintain manually, so its talk too much of time to get and store it.
- Even though data is on spreadsheet sometimes not only order might be missed but also wrongly entered or twice.
- Getting difficulties to managing multiple forms.

The above-mentioned problems are solved by our ANJ website and the website is computerized and has been developed advanced language to provide more facilities to the customers. We can convert the manual work to computerized work and use it easily and decrease the time consuming certainly.

CHAPTER 3

MATERIALS AND METHODS

3.1 MATERIALS

3.1.1 HARDWARE REQUIREMENTS

- Processor - Intel Pentium iv or above.
- Clock Speed – 1.9 GHz or more.
- System type – 32 bits or 64 bits
- Ram – 2GB or above.
- HDD – 120GB

3.1.2 SOFTWARE REQUIREMENTS

- Operating System - Windows 7 or above
- Front End – HTML, CSS, JAVASCRIPT
- Back End - PHP.

3.2 METHODOLOGY

The system development life cycle (SDLC) is a conceptual model used in project management that describes the stages involved in an information system development project, from an initial feasibility study through maintenance of the completed application.
Various SDLC methodologies have been developed to guide the processes involved, including the waterfall model (which was the original SDLC method); rapid application development (RAD); the fountain model; the spiral model; build and fix, and synchronize and stabilize. Some methods work better for specific types of projects, but in the final analysis, the most important factor for the success of a project may be how closely the particular plan was followed.

Software Development Life Cycle is the application of standard business practices to building software applications. It's typically divided into six to eight steps. Some project managers will combine, split, or omit steps, depending on the project's scope. These are the core components recommended for all software development projects.

- Planning
- Analysis
- Design
- Testing
- Implementation
- Maintenance

IN GENERAL, AN SDLC METHODOLOGY FOLLOWS THE FOLLOWING STEPS:

The existing system is evaluated. Deficiencies are identified and this can be done by interviewing users of the system and consulting with support personnel.

The new system requirements are defined. In particular, the deficiencies in the existing system must be addressed with specific proposals for improvement. The proposed system is designed. Plans are laid out concerning the physical construction, hardware, operating systems, programming, communications, and security issues.

The new system is developed. The new components and programs must be obtained and installed. Users of the system must be trained in its use, and all aspects of performance must be tested. If necessary, adjustments must be made at this stage.

The system is put into use and this can be done in various ways. The new system can be phased in, according to application or location, and the old system gradually be replaced in some cases it may be more cost-effective to shut down the old system and implement the new system all at once.

CHAPTER 4

TECHNOLOGIES

4.1 FRONTEND AND BACKEND PROGRAMMING

4.1.1 FRONTEND PROGRAMMING

- HTML, CSS, JAVASCRIPT

4.1.2 BACKEND PROGRAMMING

- HTML
- PHP

4.3 IDE'S

- Visual Studio Code 2022

5.2 SCHEDULE AND BUDGET SUMMARY

5.2.1 SCHEDULE

Table 1: Project Schedule

Item	Date
Project Proposal	2024/03/16
Software Project Management Plan	2024/03/17 to 2024/03/25
Interface Design	2024/03/26 to 2024/04/01
ER Diagram Design	2024/04/02 to 2024/04/06
Mid Progress Review	2024/04/07 to 2024/04/09
Starting Development coding	2024/04/10 to 2024/04/20
Software Testing	2024/04/21 to 2024/04/30
Error Handling	2024/05/01 to 2024/05/10
Software Testing and Error Handling	2024/05/11 to 2024/05/16
Making Final Report	2024/05/17 to 2024/05/25
Final Report Submission	2024/05/26 to 2024/05/26
Papering Project Presentation	2024/05/27 to 2024/05/28
Final Project Presentation	2024/05/29 to 2024/06/01

5.2.2 BUDGET SUMMARY

Table 2: Budget Summary

Item	Date	Rate	Hours	Cost
Project Proposal	2024/03/16	160.00 Rs	10	1600
Software Project Management Plan	2024/03/17 to 2024/03/25	80.00 Rs	115	9200
Interface Design	2024/03/26 to 2024/04/01	160.00 Rs	117	18720
ER Diagram Design	2024/04/02 to 2024/04/06	180.00 Rs	89	16020
Mid Progress Review	2024/04/07 to 2024/04/09	30.00 Rs	200	6000
Starting Development coding	2024/04/10 to 2024/04/20	200.00 Rs	170	34000
Software Testing	2024/04/21 to 2024/04/30	90.00 Rs	119	10710
Error Handling	2024/05/01 to 2024/05/10	97.00 Rs	230	22310
Software Testing and Error Handling	2024/05/11 to 2024/05/16	600.00 Rs	100	60000
Making Final Report	2024/05/17 to 2024/05/25	40.00 Rs	490	19600
Final Report Submission	2024/05/26 to 2024/05/26			
Papering Project Presentation	2024/05/27 to 2024/05/28	50.00 Rs	89	4450
Final Project Presentation	2024/05/29 to 2024/06/01			
Total Cost				202,610.00Rs

CONCLUSION

In conclusion, the creation of the ANJ mobile shopping website has greatly improved accessibility, user experience, and merchant income generation. Even with problems like performance optimization and security issues, the system has proven to be valuable in offering a smooth shopping experience. In order to keep the system competitive and satisfy changing customer needs and technology improvements in the shopping system, it will be imperative to solve these issues going forward and keep expanding its features and functionalities.
